LIGHTING

## LIGHT IS ENOUGH

Discover the MONO lamp collection designed for lovers of modern interiors. A cosy relaxation area or a functional work space, the main lighting of a room or a gentle lighting accent – with the help of the versatile MONO lamps, you can easily dress any part of your home in light.

Mono is all you need to enchant a space with light.

\*Mono means "the only one".

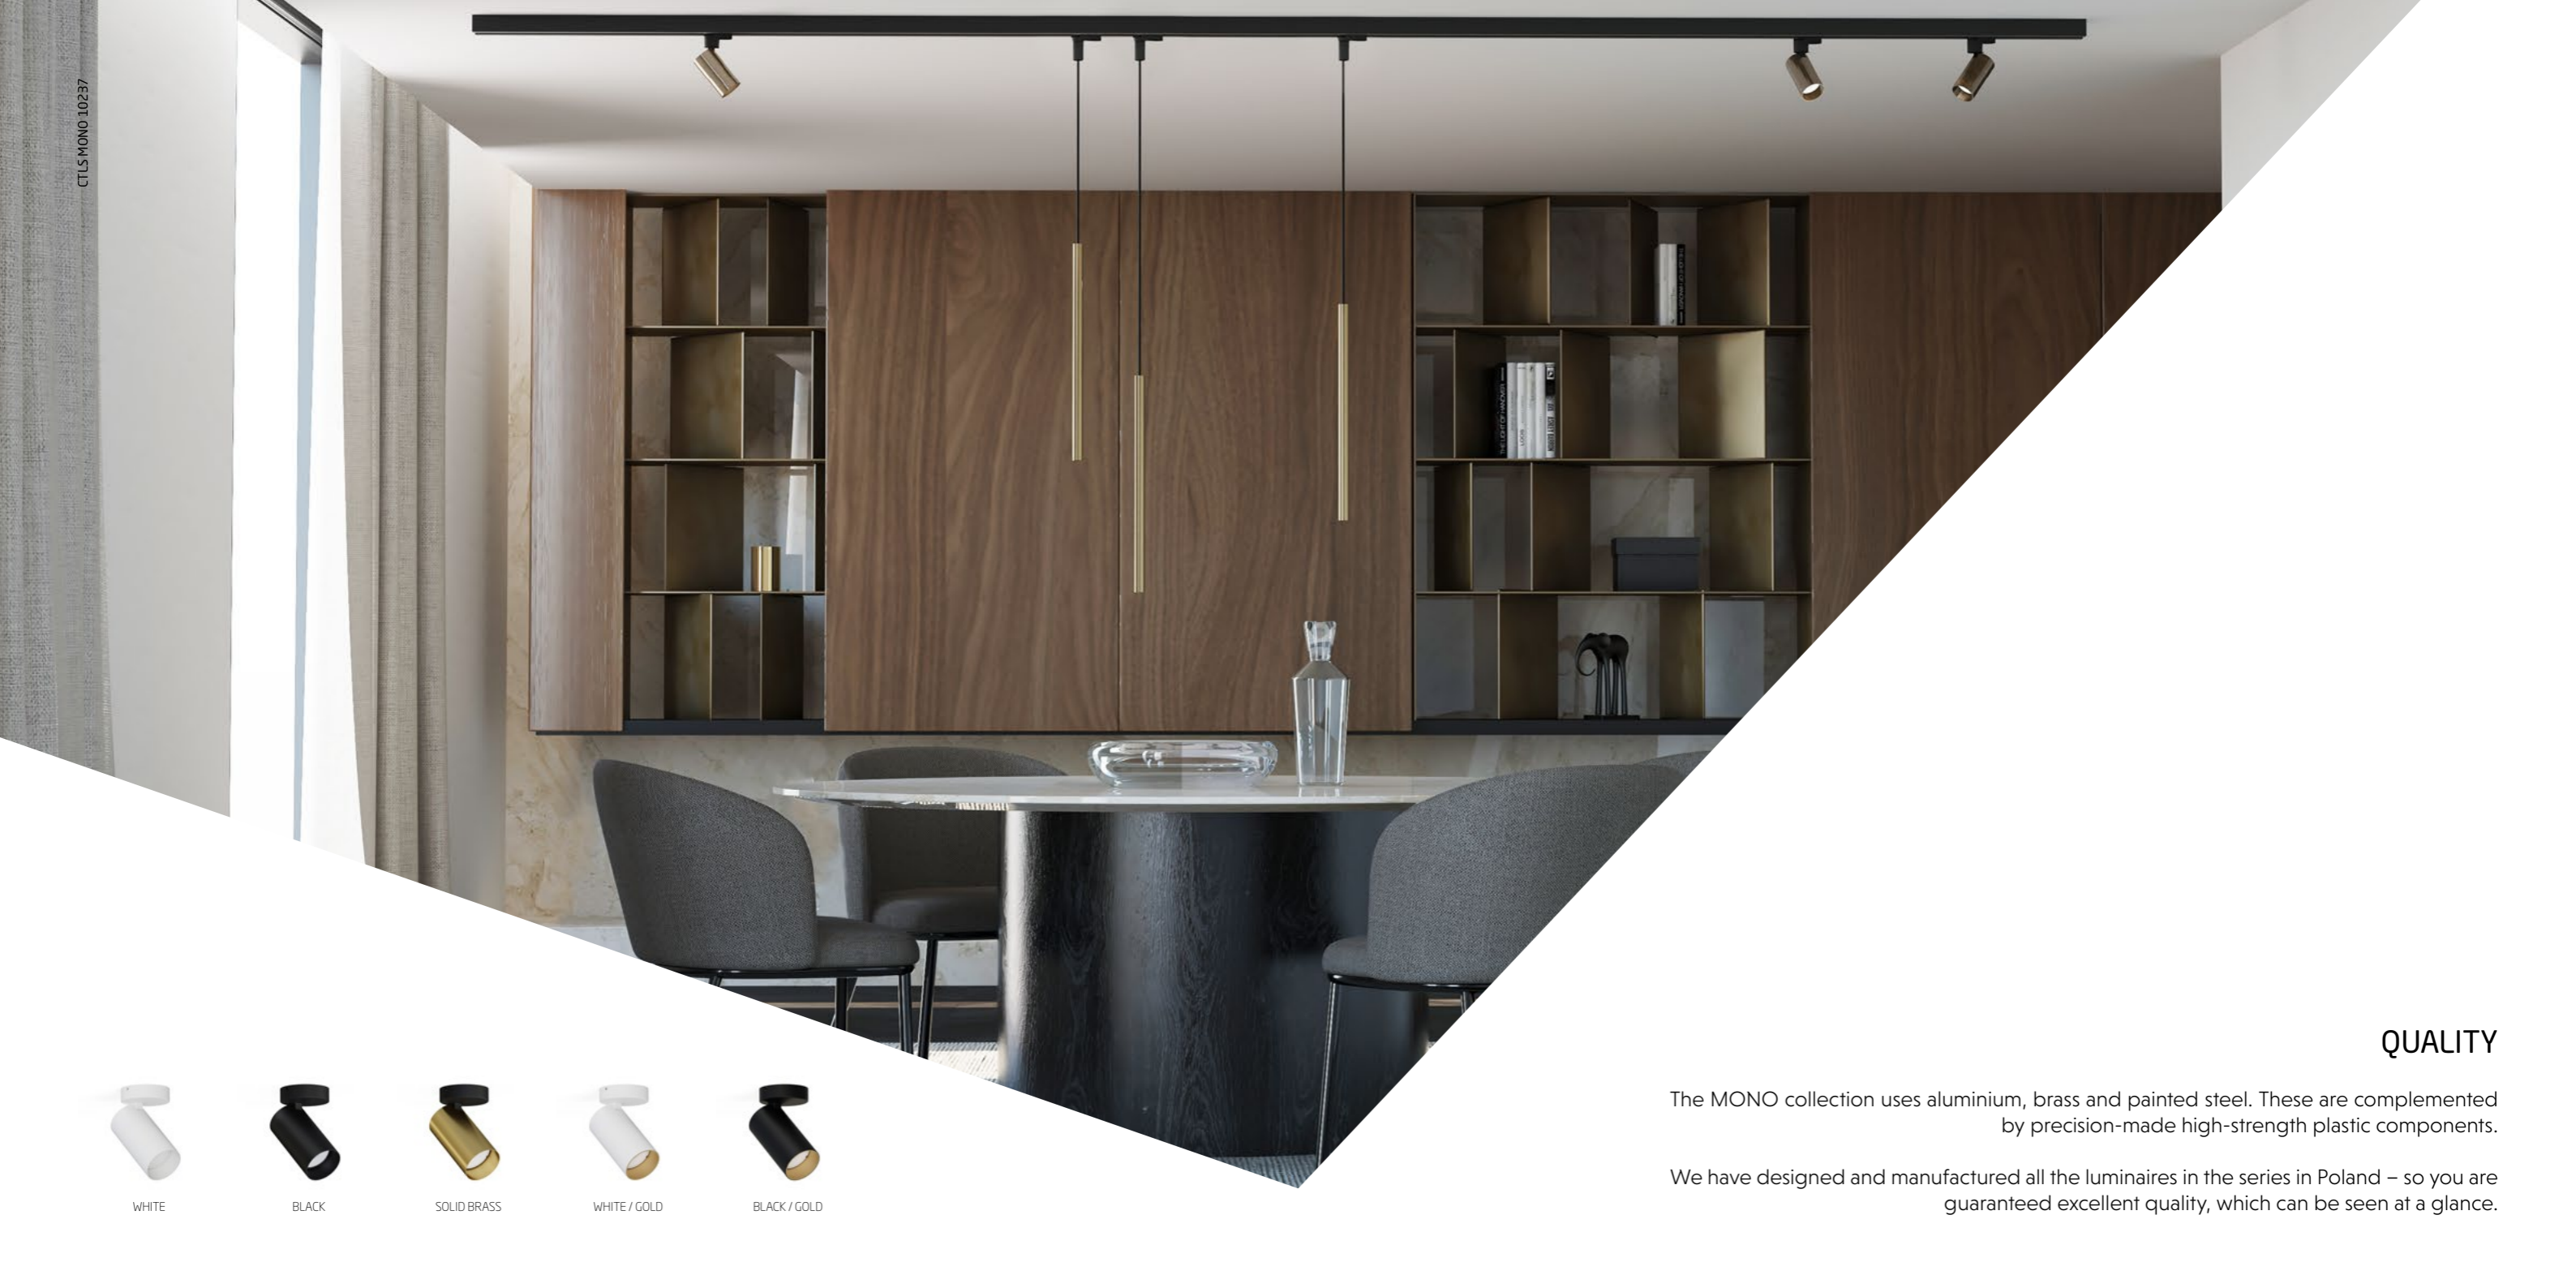

## MINIMALISM

Simple, cylindrical heads supported by an almost invisible joint – MONO luminaires are designed to introduce light discreetly into the interior. The minimalist and streamlined design are a nod to the beauty inherent in the light rays. It is also a sign of respect for the space in which the luminaire is located. It's a message: less is more.

The aesthetics of the MONO series is timeless. The black and white with the brass finish can attract attention, or discreetly disappear in the interior, letting the light plays the first fiddle. The choice is yours.

## QUALITY

The MONO collection uses aluminium, brass and painted steel. These are complemented by precision-made high-strength plastic components.

We have designed and manufactured all the luminaires in the series in Poland – so you are guaranteed excellent quality, which can be seen at a glance.

## LONG MONO BEAMS

The 3 and 4 m MONO beams consist of two parts, 1.5 m or 2 m long respectively. With their help, you can illuminate a large room using a single power source. The discreet connection of the two pieces is evidence of the impeccable design that distinguishes the entire collection.

## MONO CORNER

Completing the series is a MONO CORNER version consisting of two 1.5 m or 2 m beams set at right angles. We have divided all luminaires into 2 lighting zones so that you can decide which lighting scene you want to create.

## MONO SURFACE

The SURFACE version are bars fixed in the suspended ceiling. Thanks to its unique design, you no longer have to depend on the structural layout of the ceiling for your lighting project. You can easily move the luminaire fixing elements along the entire length of the strip and mount the lamp anywhere on the plasterboard.

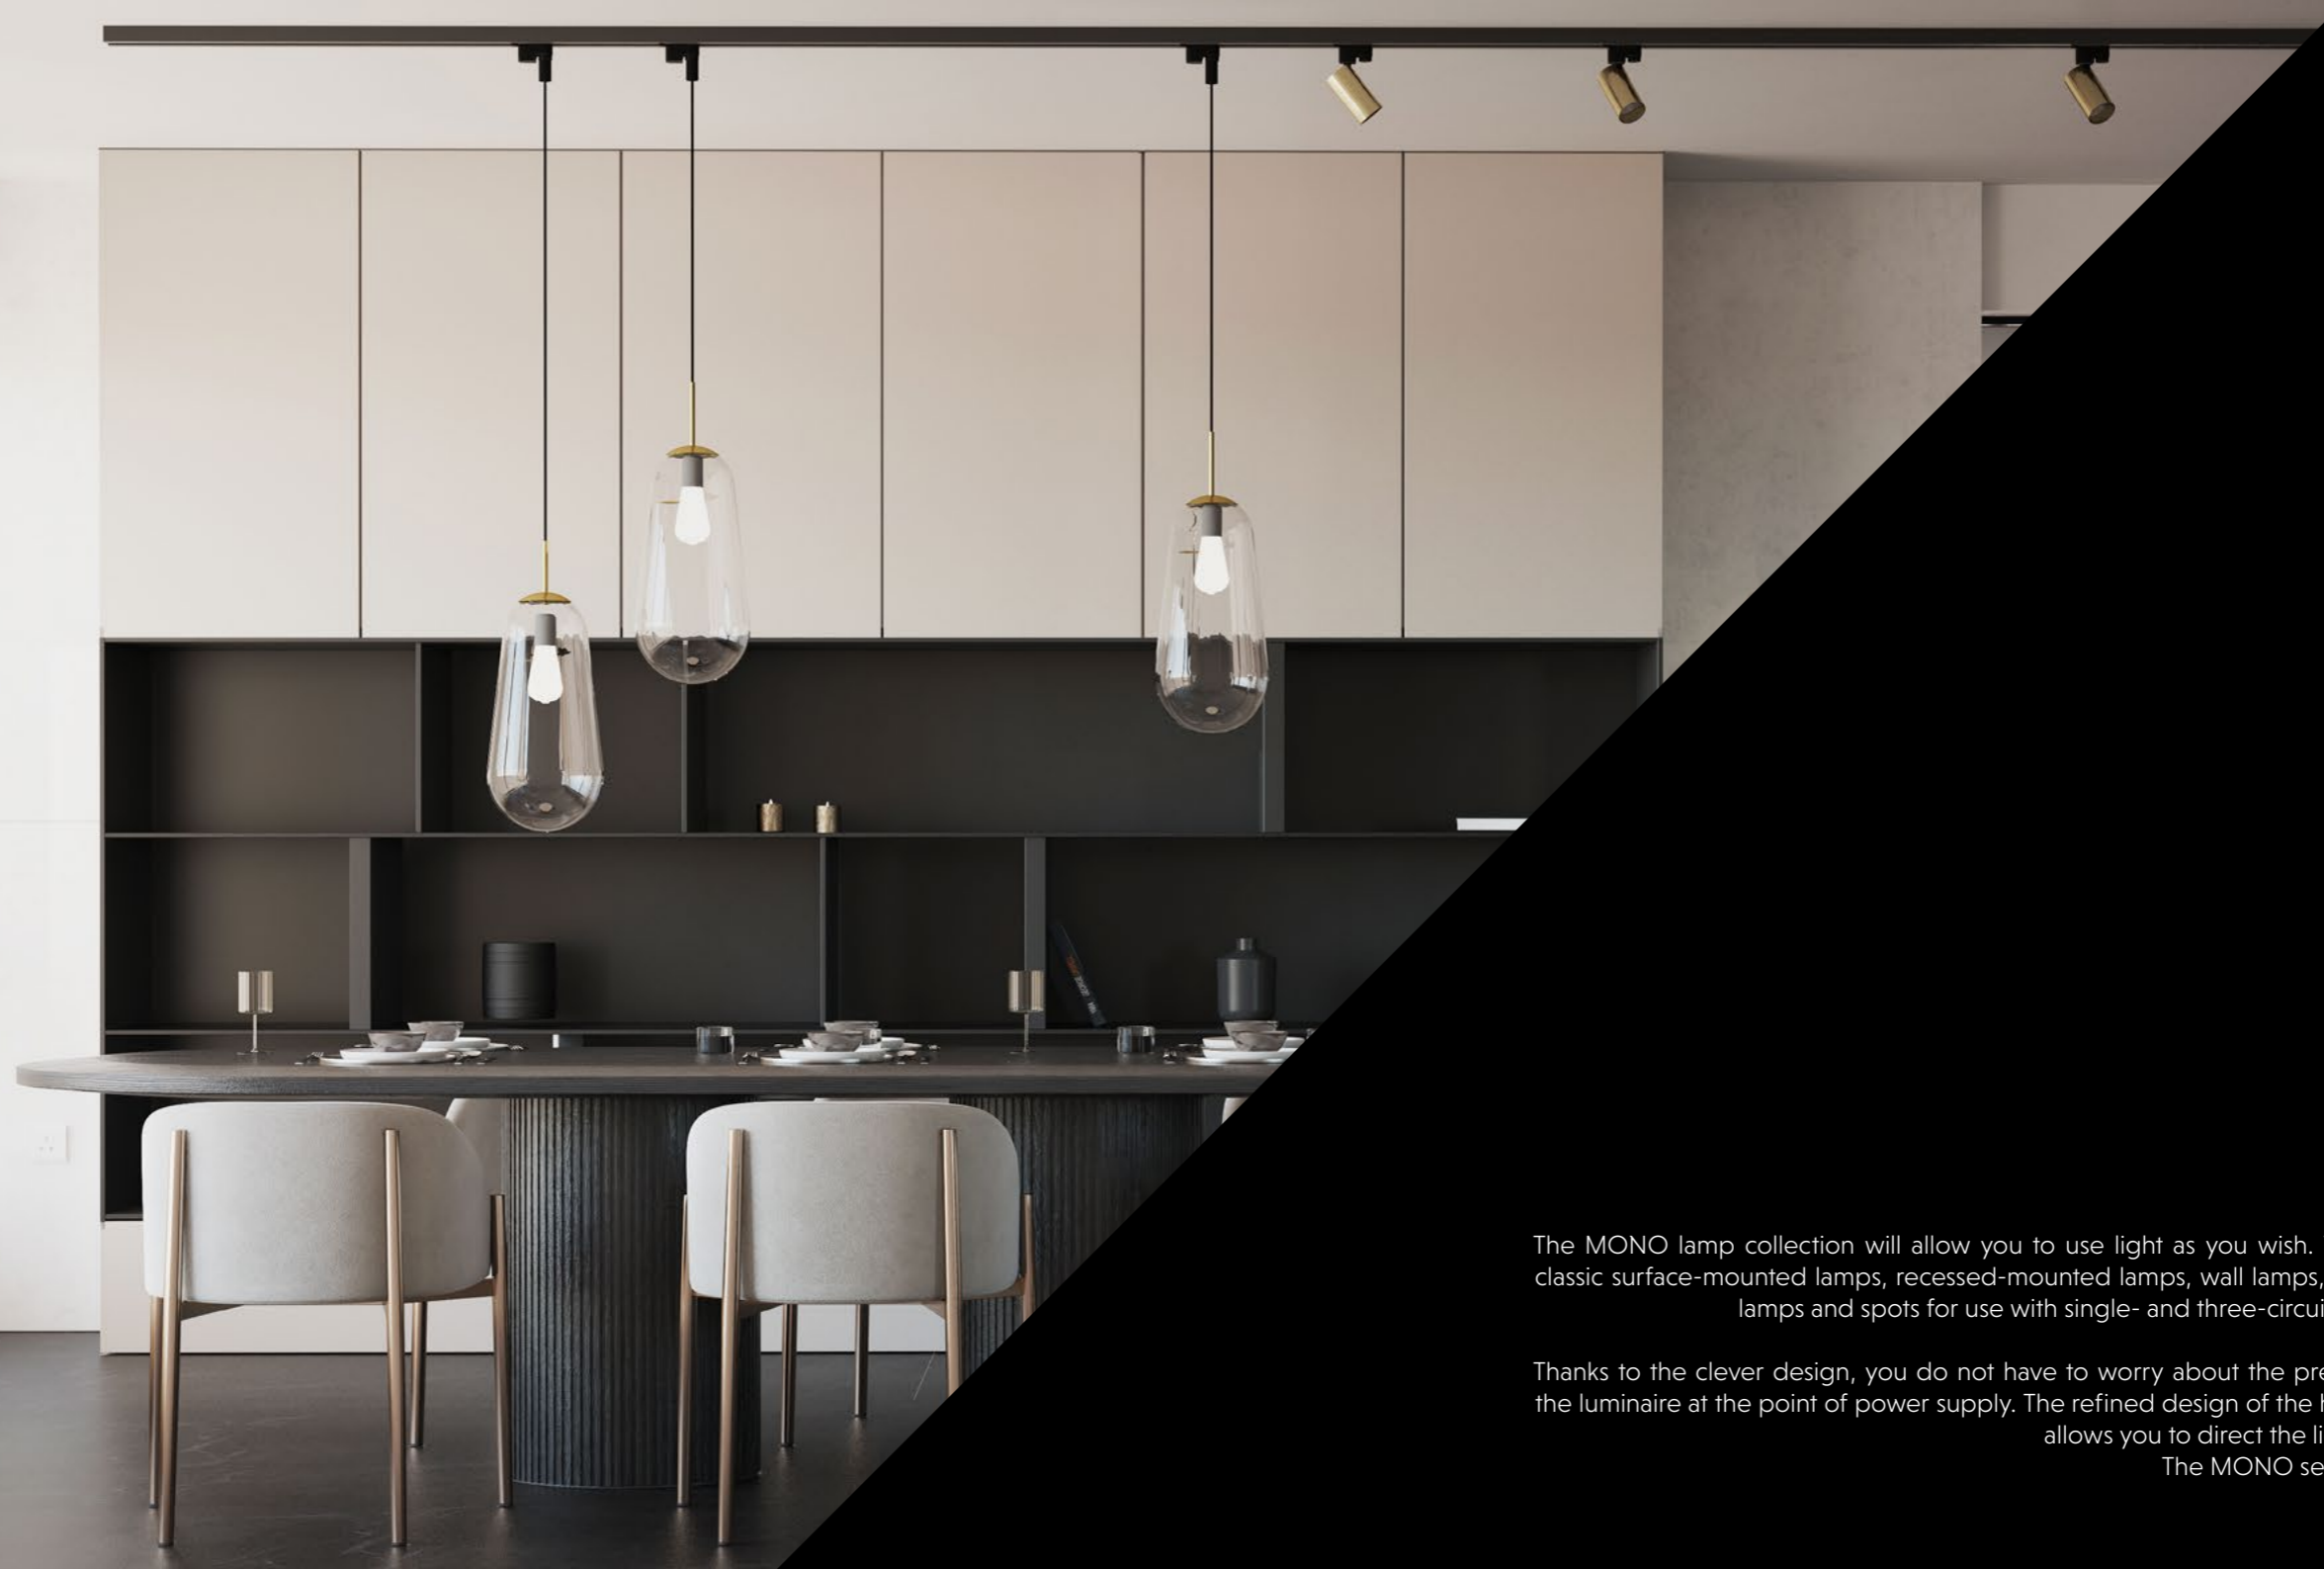

## MONO DEEP

MONO DEEP is the next face of a family of modern lamps designed with minimalist interiors in mind.

The lamps are recessed-mounted – simple in form, the shades are released from a deep trough. Thanks to the articulated joints, it is possible to adjust the position of the light sources as desired. The 345 degrees of rotation around its own axis and the 90-degree movement of the shade relative to the articulated joint make it easy to create the desired lighting scenes.

MONO DEEP recessed-mounted lamps come in the classic colours of black and white, making them a perfect match for any interior design.

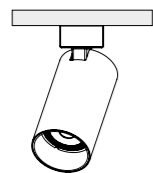

## VERSATILITY

The MONO lamp collection will allow you to use light as you wish. The series includes classic surface-mounted lamps, recessed-mounted lamps, wall lamps, standing and desk lamps and spots for use with single- and three-circuit track light systems.

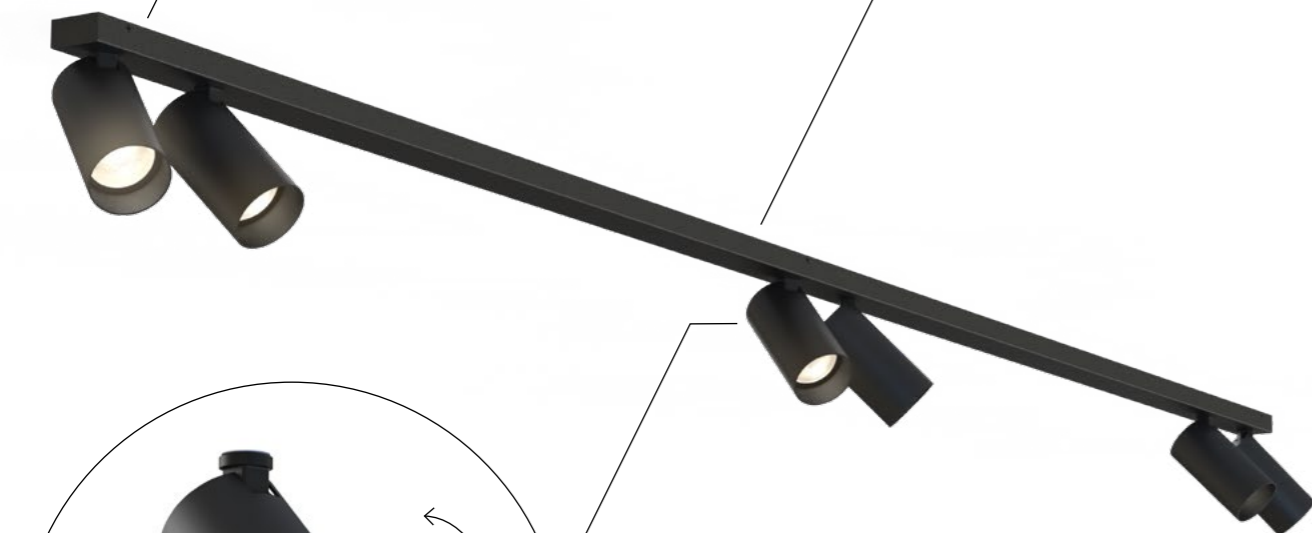

Thanks to the clever design, you do not have to worry about the precise positioning of the luminaire at the point of power supply. The refined design of the heads of each lamp allows you to direct the light in any direction. The MONO series knows no limits.

# MONO

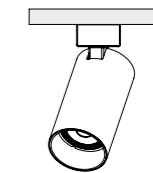

Distributed in pairs, the light points allow a wide range of illumination of the space.

The lamp base has been reduced to a minimum size thanks to the optimised positioning of the components.

Range of rotation of the light point: 90°, 345°.

# MONO

It is possible to run the cable to the terminal block along the entire length of the beam.

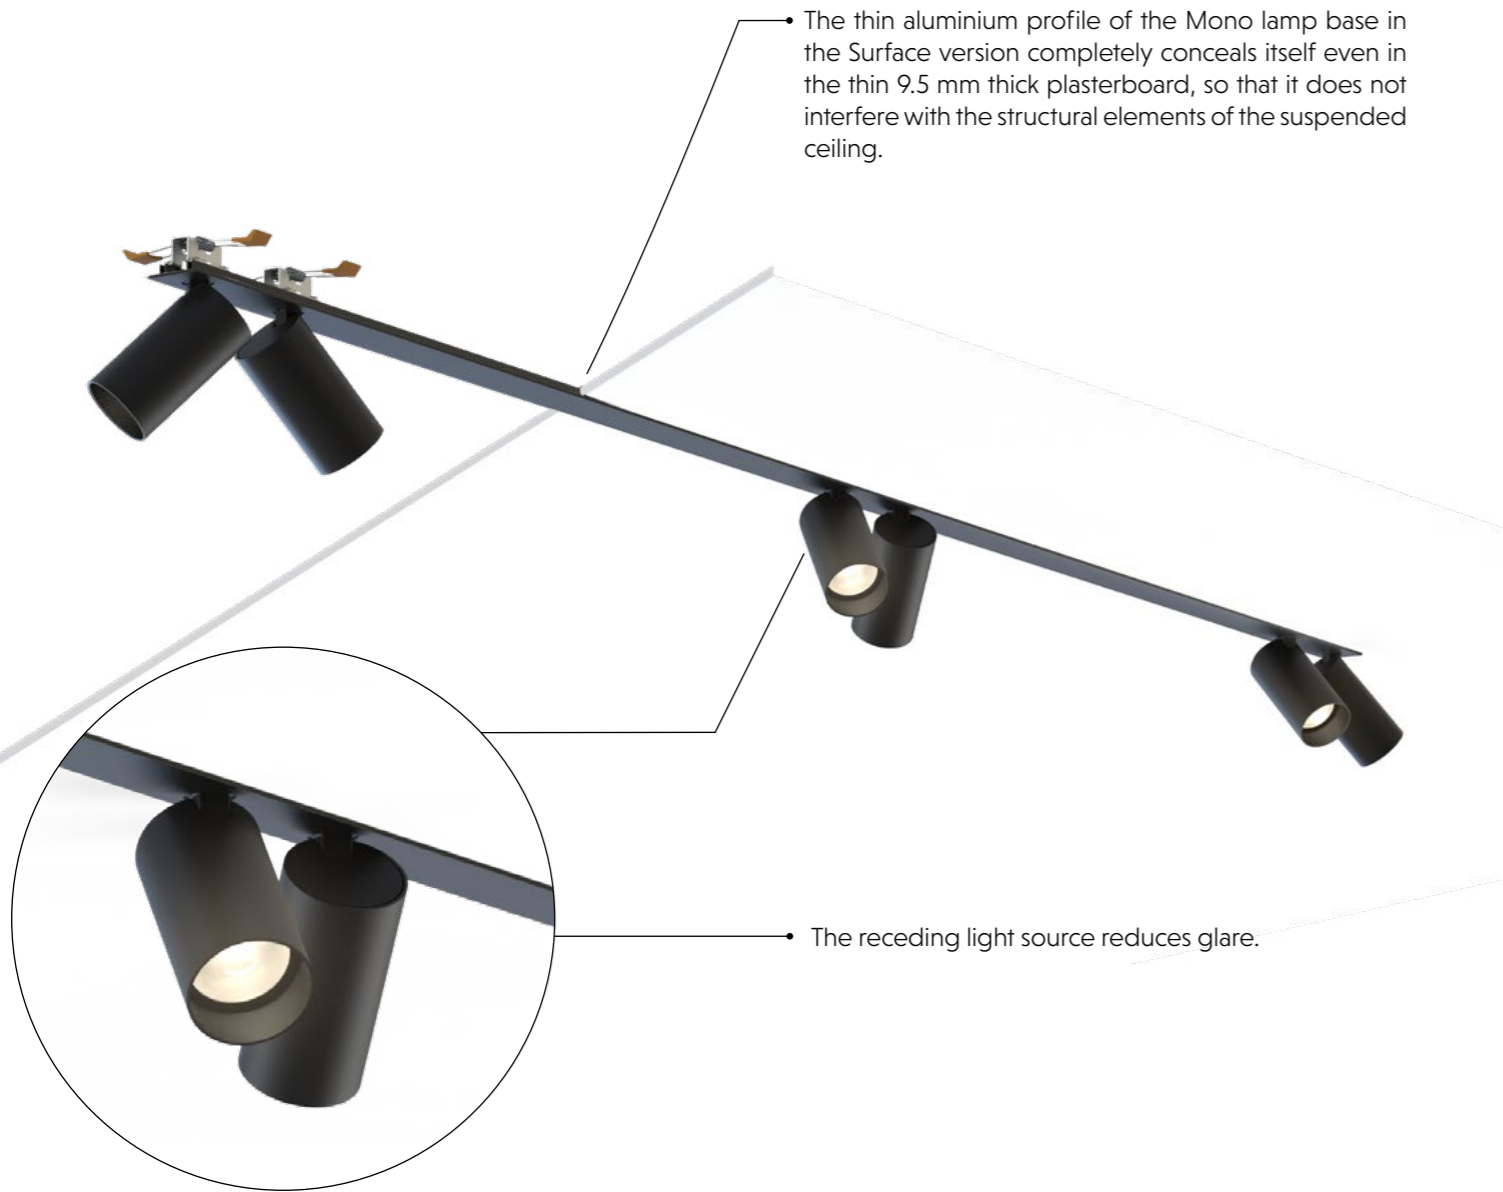

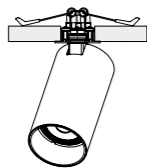

## ONE-CLICK SYSTEM

No more hassle changing the bulb – the patented One-Click System allows you to slide off the tube covering the light source in one movement. Convenient and quick bulb replacement is a convenience you will appreciate on a daily basis.

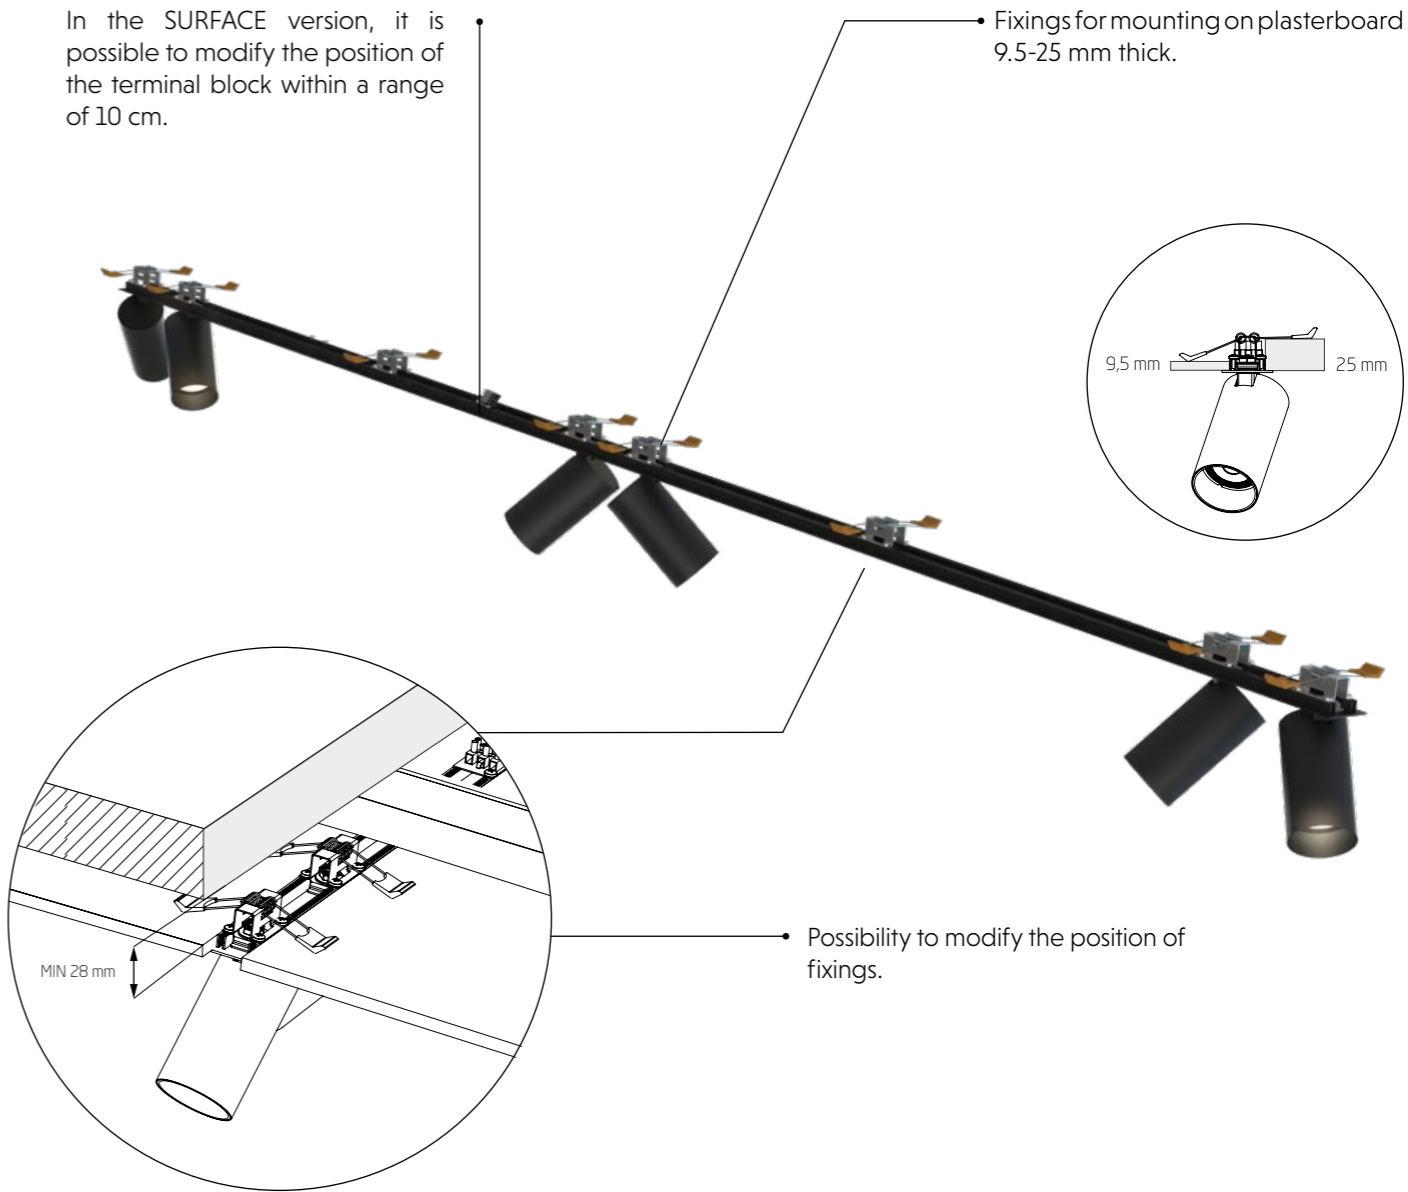

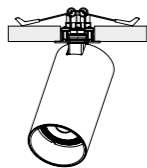

# MONO SURFACE

• The thin aluminium profile of the Mono lamp base in the Surface version completely conceals itself even in the thin 9.5 mm thick plasterboard, so that it does not interfere with the structural elements of the suspended ceiling.

• The receding light source reduces glare.

# MONO SURFACE

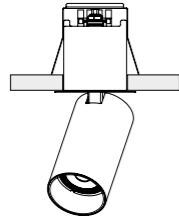

In the SURFACE version, it is possible to modify the position of the terminal block within a range of 10 cm.

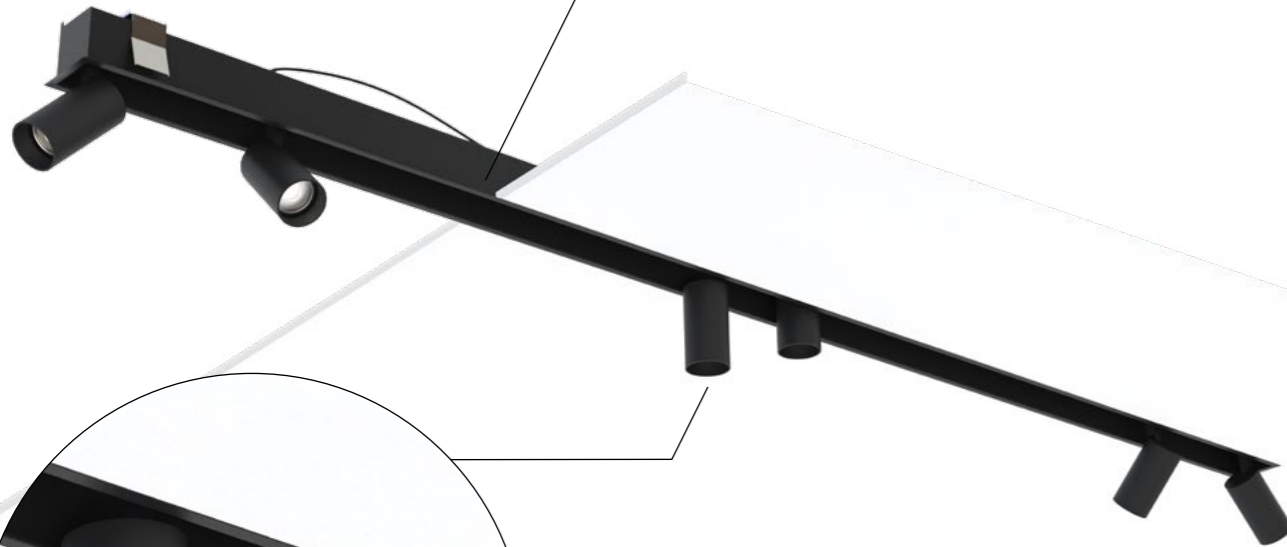

• Fixings for mounting on plasterboard 9.5-25 mm thick.

• Possibility to modify the position of fixings.

# MONO DEEP

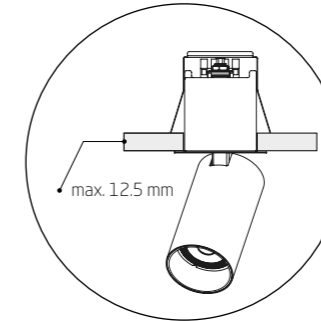

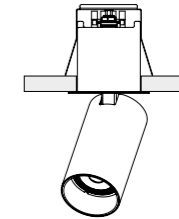

The tall base of the DEEP recessed-mounted version of the lamps additionally offers the possibility of concealing the lamp shades  $\frac{3}{4}$  of their height.

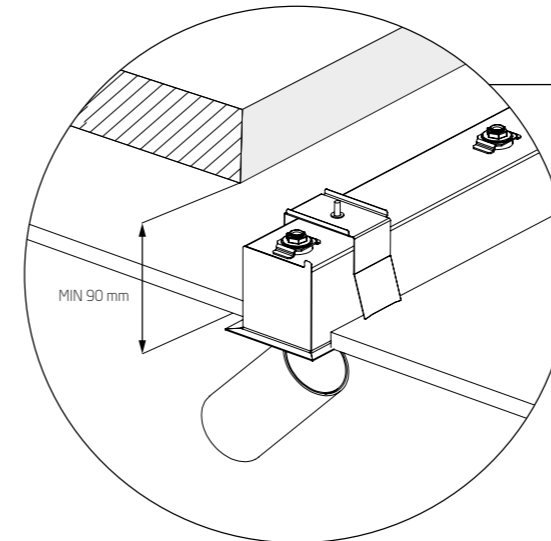

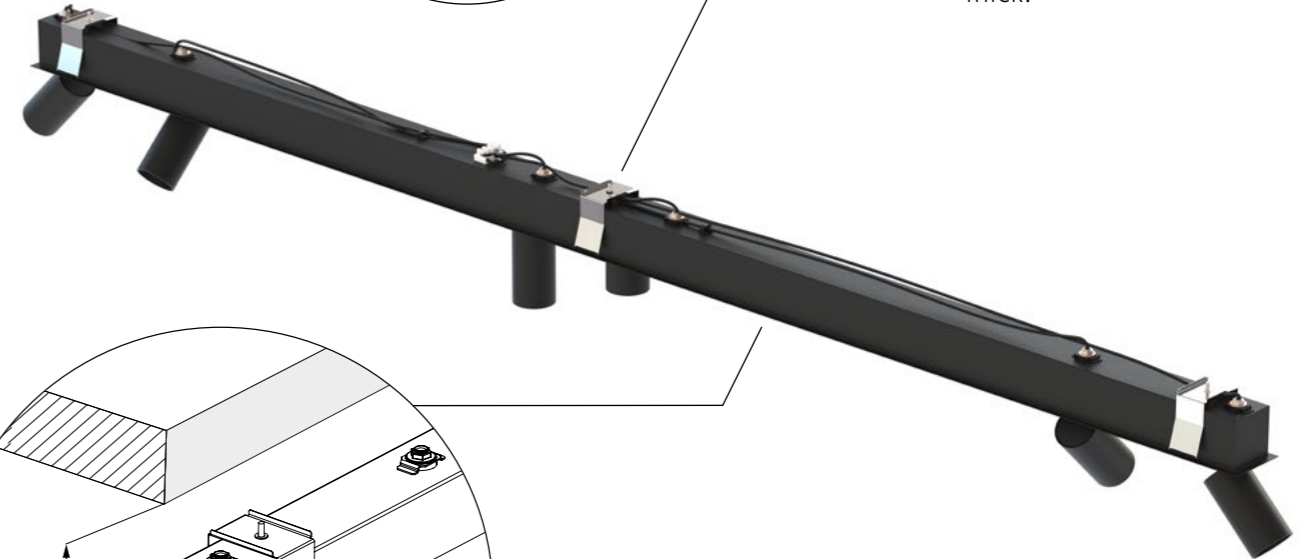

The unique articulated joint design used in the DEEP version gives a wide range of extension of the light points from the base, allowing for a variety of lighting effects.

# MONO DEEP

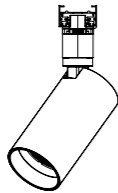

The stainless steel mounting elements allow the luminaire to be securely fastened to plasterboard up to 12.5 mm thick.

The required minimum distance between the plasterboard and the ceiling is 9 cm.

PROFILE MONO

Individual PROFILE MONO lamps are the solution for use with the single-circuit PROFILE track light system.
